Barcelona, Spain · EU citizen

Senior Software Engineer with 9 years building web applications and engineering platforms. Led large cross-cutting migrations at Mews across C#/.NET and TypeScript/React, and owned CI/CD and build tooling for a 150+ package monorepo. Seeking full-stack or backend software engineer opportunities.

EXPERIENCE

- **Mews** · Prague, Czech Republic → Barcelona, Spain Jul 2018 – Jul 2026
Senior Software Engineer, Platform Apr 2023 – Jul 2026
 - **Validation migration:** Advocated for and drove a year-long migration of the core PMS app off an abandoned validation library with unpatched vulnerabilities, replacing it with type-safe Zod schemas across 60+ forms in every domain. Coordinated 20+ contributors and delivered it in full.
 - **Admin migration:** Found the tractable slice of a company-wide migration that had stalled for years: moved around 100 of 800+ legacy Razor pages to React, replacing server-rendered controller actions with a REST API in C#/.NET and collapsing separate create/update/delete URLs into modal flows, automating the repetitive conversion with AI tooling.
 - **Modal manager:** Picked for a nine-month mission to remove an undocumented in-house modal manager that every legacy page routed through, in staged revertible steps, with fallbacks for teams that could not migrate on our timeline.
 - **CI/CD:** Cut PR prerelease builds from roughly 40 minutes to under 20 by rebuilding Azure Pipelines for the frontend app, extracting and parallelising the build stage, and adding an automated path to revert a release or ship a hotfix.
 - **Build and shared tooling:** Cut local build time from over 5 minutes to under 1 for a 150+ package TypeScript monorepo; migrated shared tooling to TypeScript and introduced TanStack Query to open a path away from Redux.
Frontend Developer, Platform Nov 2021 – Apr 2023
 - **Modernisation:** Drove incremental migrations across a 150+ package codebase on a four-person platform team (JavaScript to TypeScript, fp-ts, monorepo restructuring, dated dependencies), using a strangler-fig approach and feature flags so product teams kept shipping.
 - **API contracts:** Contributed to a generator producing TypeScript types from the backend's OpenAPI schemas, keeping frontend and backend contracts in sync.
Frontend Developer, Product teams Jul 2018 – Nov 2021
 - **Reservations:** Led the Angular to React + Redux migration of the reservation creation module, then the core of the PMS: rewrote its data layer, shipped a redesigned UI, and unblocked product features tracked at executive level. Delivered in under six months with one other engineer.
- **Easy Software** · Prague, Czech Republic Apr 2017 – Jun 2018
Junior Frontend Developer

PROJECTS

- **BuildHype:** Waitlist service built end to end: Next.js and TypeScript on Supabase (Postgres), Google sign-in, an embeddable signup widget any site can drop in, and Redis rate limiting to protect the public endpoint from bots. Tested with Jest, deployed on Vercel.
- **Custom ESLint Rules Guide:** Technical article on custom ESLint rules: 2nd most-read post on the company engineering blog, ranking on the first page of Google results.

SKILLS

- **Languages:** C#, TypeScript, JavaScript, SQL
- **Frameworks:** .NET, NodeJS, React, Next.js
- **Technologies:** REST APIs, PostgreSQL, Redis, TanStack, CI/CD (Azure, GitHub), Cursor, Claude Code

EDUCATION

- **University of Chemistry and Technology** · Prague, Czech Republic Sep 2014 – Oct 2018
Bachelor of Science in Chemistry and Chemical Technologies
